Quotes App

Browse original motivational practice quotes, choose another at random and share the displayed text through Android's system share sheet.

Requirement coverage

Collection and random selection - Twelve original practice quotes are stored in a string-array. Next chooses randomly from all other items, avoiding an immediate repeat.

XML interface - TextView renders the quote and collection attribution. Buttons update the quote or open sharing. The screen scrolls on smaller displays.

Persistence and Intents - SharedPreferences remembers the current quote. Saved view state handles recreation. ACTION_SEND with text/plain is wrapped in an Android chooser.

Run and review

Open the source folder in Android Studio, install SDK 35 / Build Tools 35.0.0 and use JDK 17 or 21. Sync Gradle and run the quotes module on Android 8.0 / API 26 or later.

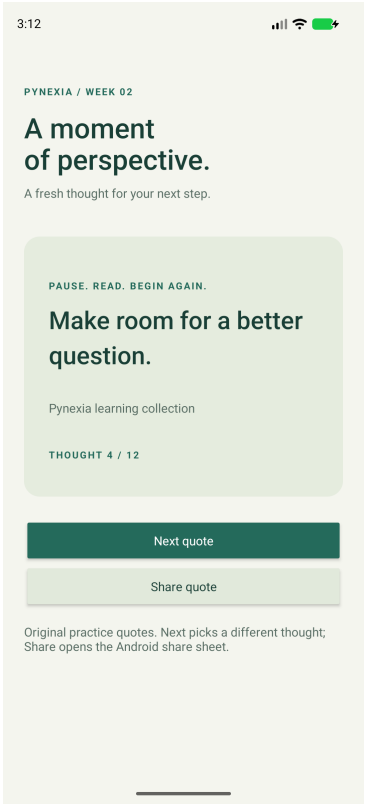

1. Open the app and read the current thought.
2. Tap Next quote; the selected thought changes.
3. Rotate or close and reopen the app; the current thought is retained.
4. Tap Share quote and choose a destination in the system share sheet.

Scope

A local collection of original practice text, not quotations attributed to public figures. Sharing opens a chooser and never sends a message automatically. Available destinations depend on installed apps.

Actual app screens

Captured from the tested native app on the emulator.

Current thought and sharing controls

Executed verification

3 JVM tests + 1 device tests passed. Lint: 0 errors, 47 warnings. No failures, errors or skipped tests.

Random bounds and no immediate repeat across 1,000 selections; single/empty collection handling; UI next/recreation and exact shared Intent text.

Pixel 8 emulator, Android 17 / API 37 (37.1 image), x86_64. No physical-device or API 26 test run. Lint warnings are retained without suppression. APKs are debug-signed evaluation builds.

Reproduce

.\gradlew.bat :quotes:assembleDebug :quotes:testDebugUnitTest :quotes:lintDebug

.\gradlew.bat :quotes:connectedDebugAndroidTest

The second command needs a running emulator or connected device. Initial Gradle sync needs internet. See verification/ for executed test results and lint findings.

Explanation & submission

يعرض التطبيق مجموعة من العبارات التحفيزية الأصلية المخصصة للتمرين. يختار زر التالي عبارة عشوائية مختلفة عن الحالية. يحتفظ التطبيق بالعبارة المعروضة عند إعادة فتحه أو تدوير الشاشة، ويفتح زر المشاركة نافذة المشاركة في Android بالنص الحالي.

Live Demo / Hosted URL

https://engeyad.github.io/pynexia-week2-quotes/

A hosted project showcase with real screenshots and downloads, not an Android emulator.

Attach File / Archive

Quotes-App.zip - source, Gradle wrapper, APK, screenshots, verification and this PDF. Below the 10 MB limit. APK is inside the ZIP because the earlier submission form does not list direct APK uploads.

Notes / Implementation Remarks (1307 / 2000 characters)

Native Android Quotes App implemented with Java and XML. Browse original motivational practice quotes, choose another at random and share the displayed text through Android's system share sheet.

Twelve original practice quotes are stored in a string-array. Next chooses randomly from all other items, avoiding an immediate repeat. TextView renders the quote and collection attribution. Buttons update the quote or open sharing. The screen scrolls on smaller displays. SharedPreferences remembers the current quote. Saved view state handles recreation. ACTION_SEND with text/plain is wrapped in an Android chooser.

Run: open the source folder in Android Studio, sync Gradle, and run quotes on Android 8.0/API 26 or later (compile/target SDK 35).

Validation: 3 JVM tests and 1 device tests passed on a Pixel 8 emulator, Android 17/API 37. Lint: zero errors; 47 warnings documented without suppression.

A local collection of original practice text, not quotations attributed to public figures. Sharing opens a chooser and never sends a message automatically. Available destinations depend on installed apps.

Hosted URL: project showcase with actual screenshots and downloads, not a browser emulator. The ZIP contains source, Gradle wrapper, debug APK, screenshots, verification and a bilingual PDF report.
